

sliding window maximum.

no. of windows

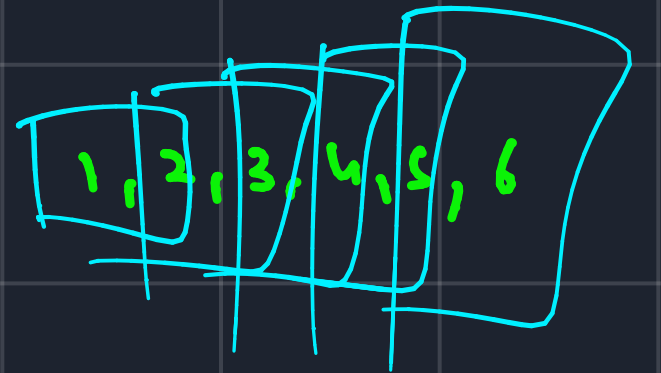

$n - k$

only need $n - k$

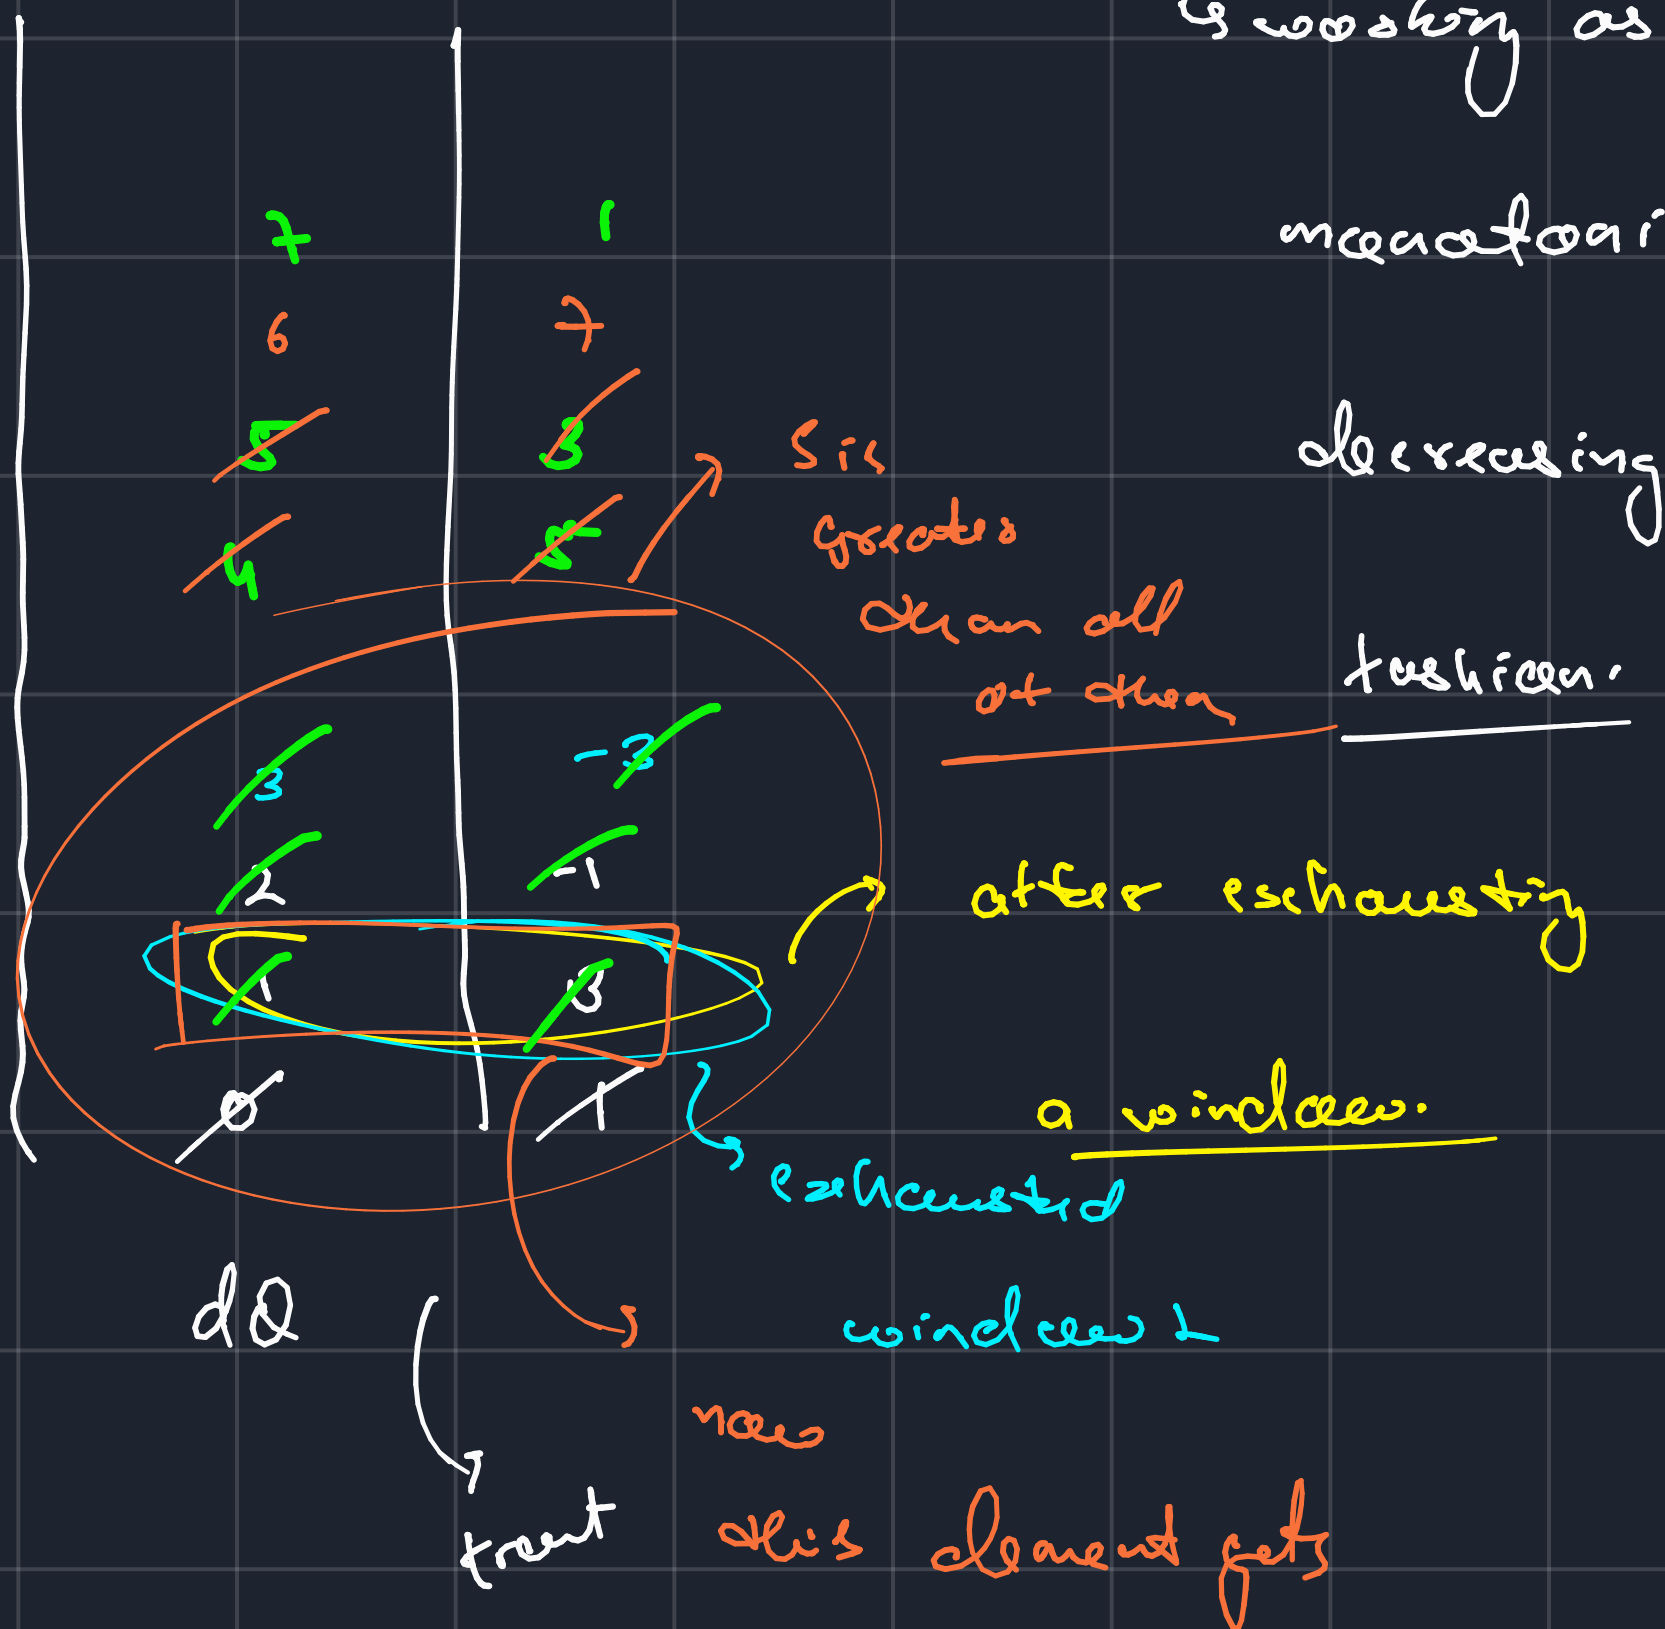

working as a

max of arr

$\rightarrow n - k = 6 - 2$

$\rightarrow 4$

3, 3, 5, 7, 7

take out elements $\leq i - k$ out of window

from front

take out elements that are less than the elements at the back.

$ans[deque.back()] < arr[i] \rightarrow \text{deque.popback()}$
