

↳ Kruskal's algorithm. → helps us find MST.

(.) sort all edges according to weight.

(wt, u, v)

✓ → 1, 1, 4

✓ → 2, 1, 2

✓ → 3, 2, 3

✓ → 3, 2, 4

→ 4, 5, 1

5, 3, 4

7, 2, 6

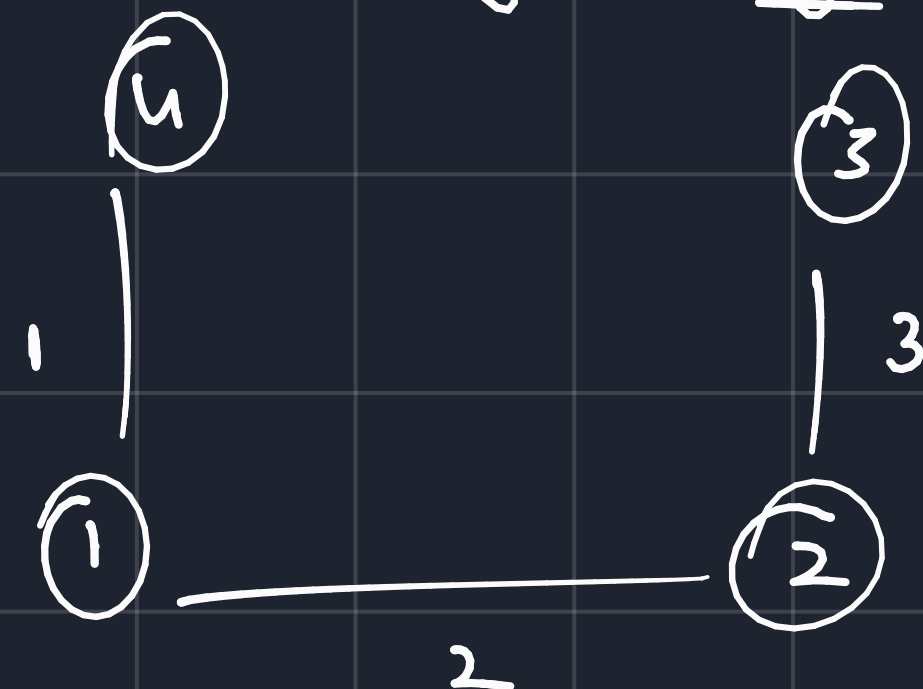

2, 3, 6

9, 4, 5

↳ uses Disjoint sets.

↳ start taking edges.

↳ check their ultimate parents.

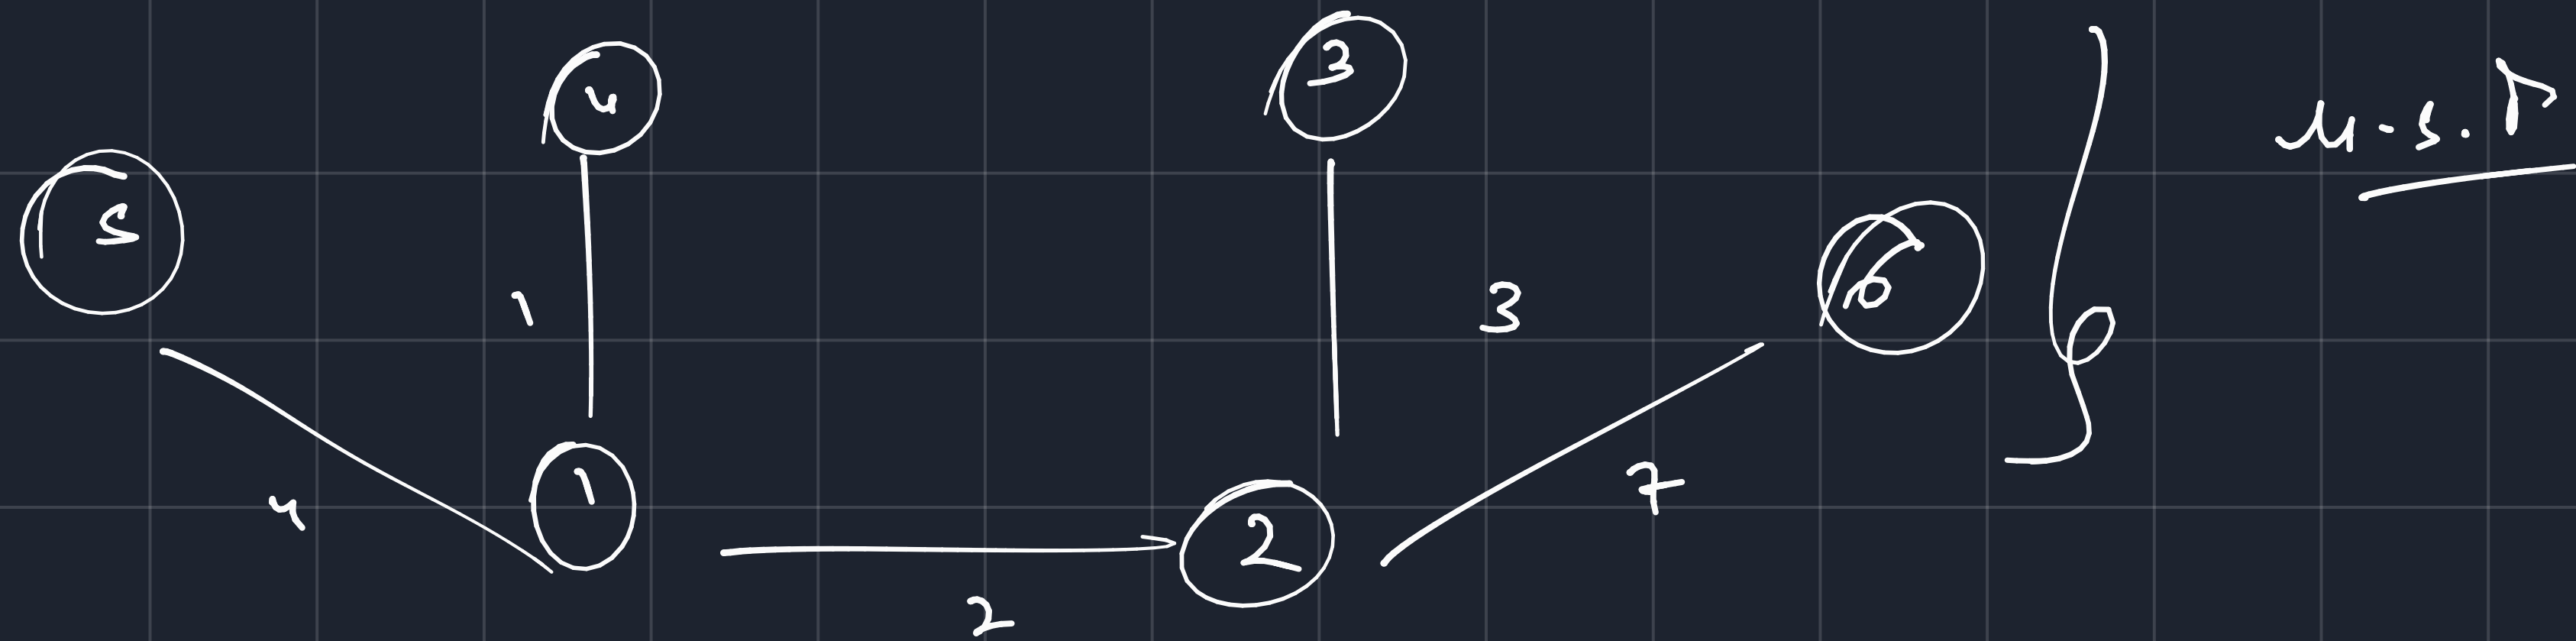

(3, 2, 4)

↳ 2 & 4 belong to

the same component

↳ we are taking them

$$wt = 1 + 2 + 3 + 4 + 7$$

↳ The intuition is if the component is connected
do not add it.
