

time/low

Bridges in Graph.

Time complexity

$O(V + 2E) + O(3N)$

using recursion

$O(V + 2E)$

Bridges

$(4, 5), (5, 6)$

$(7, 10)$

Breaking any pink link will

Bridge.

break the graph into

multiple components.

$tin[] \rightarrow$ DFS time insertion.

$low[] \rightarrow$ min lowest time insertion

of all adjacent nodes apart

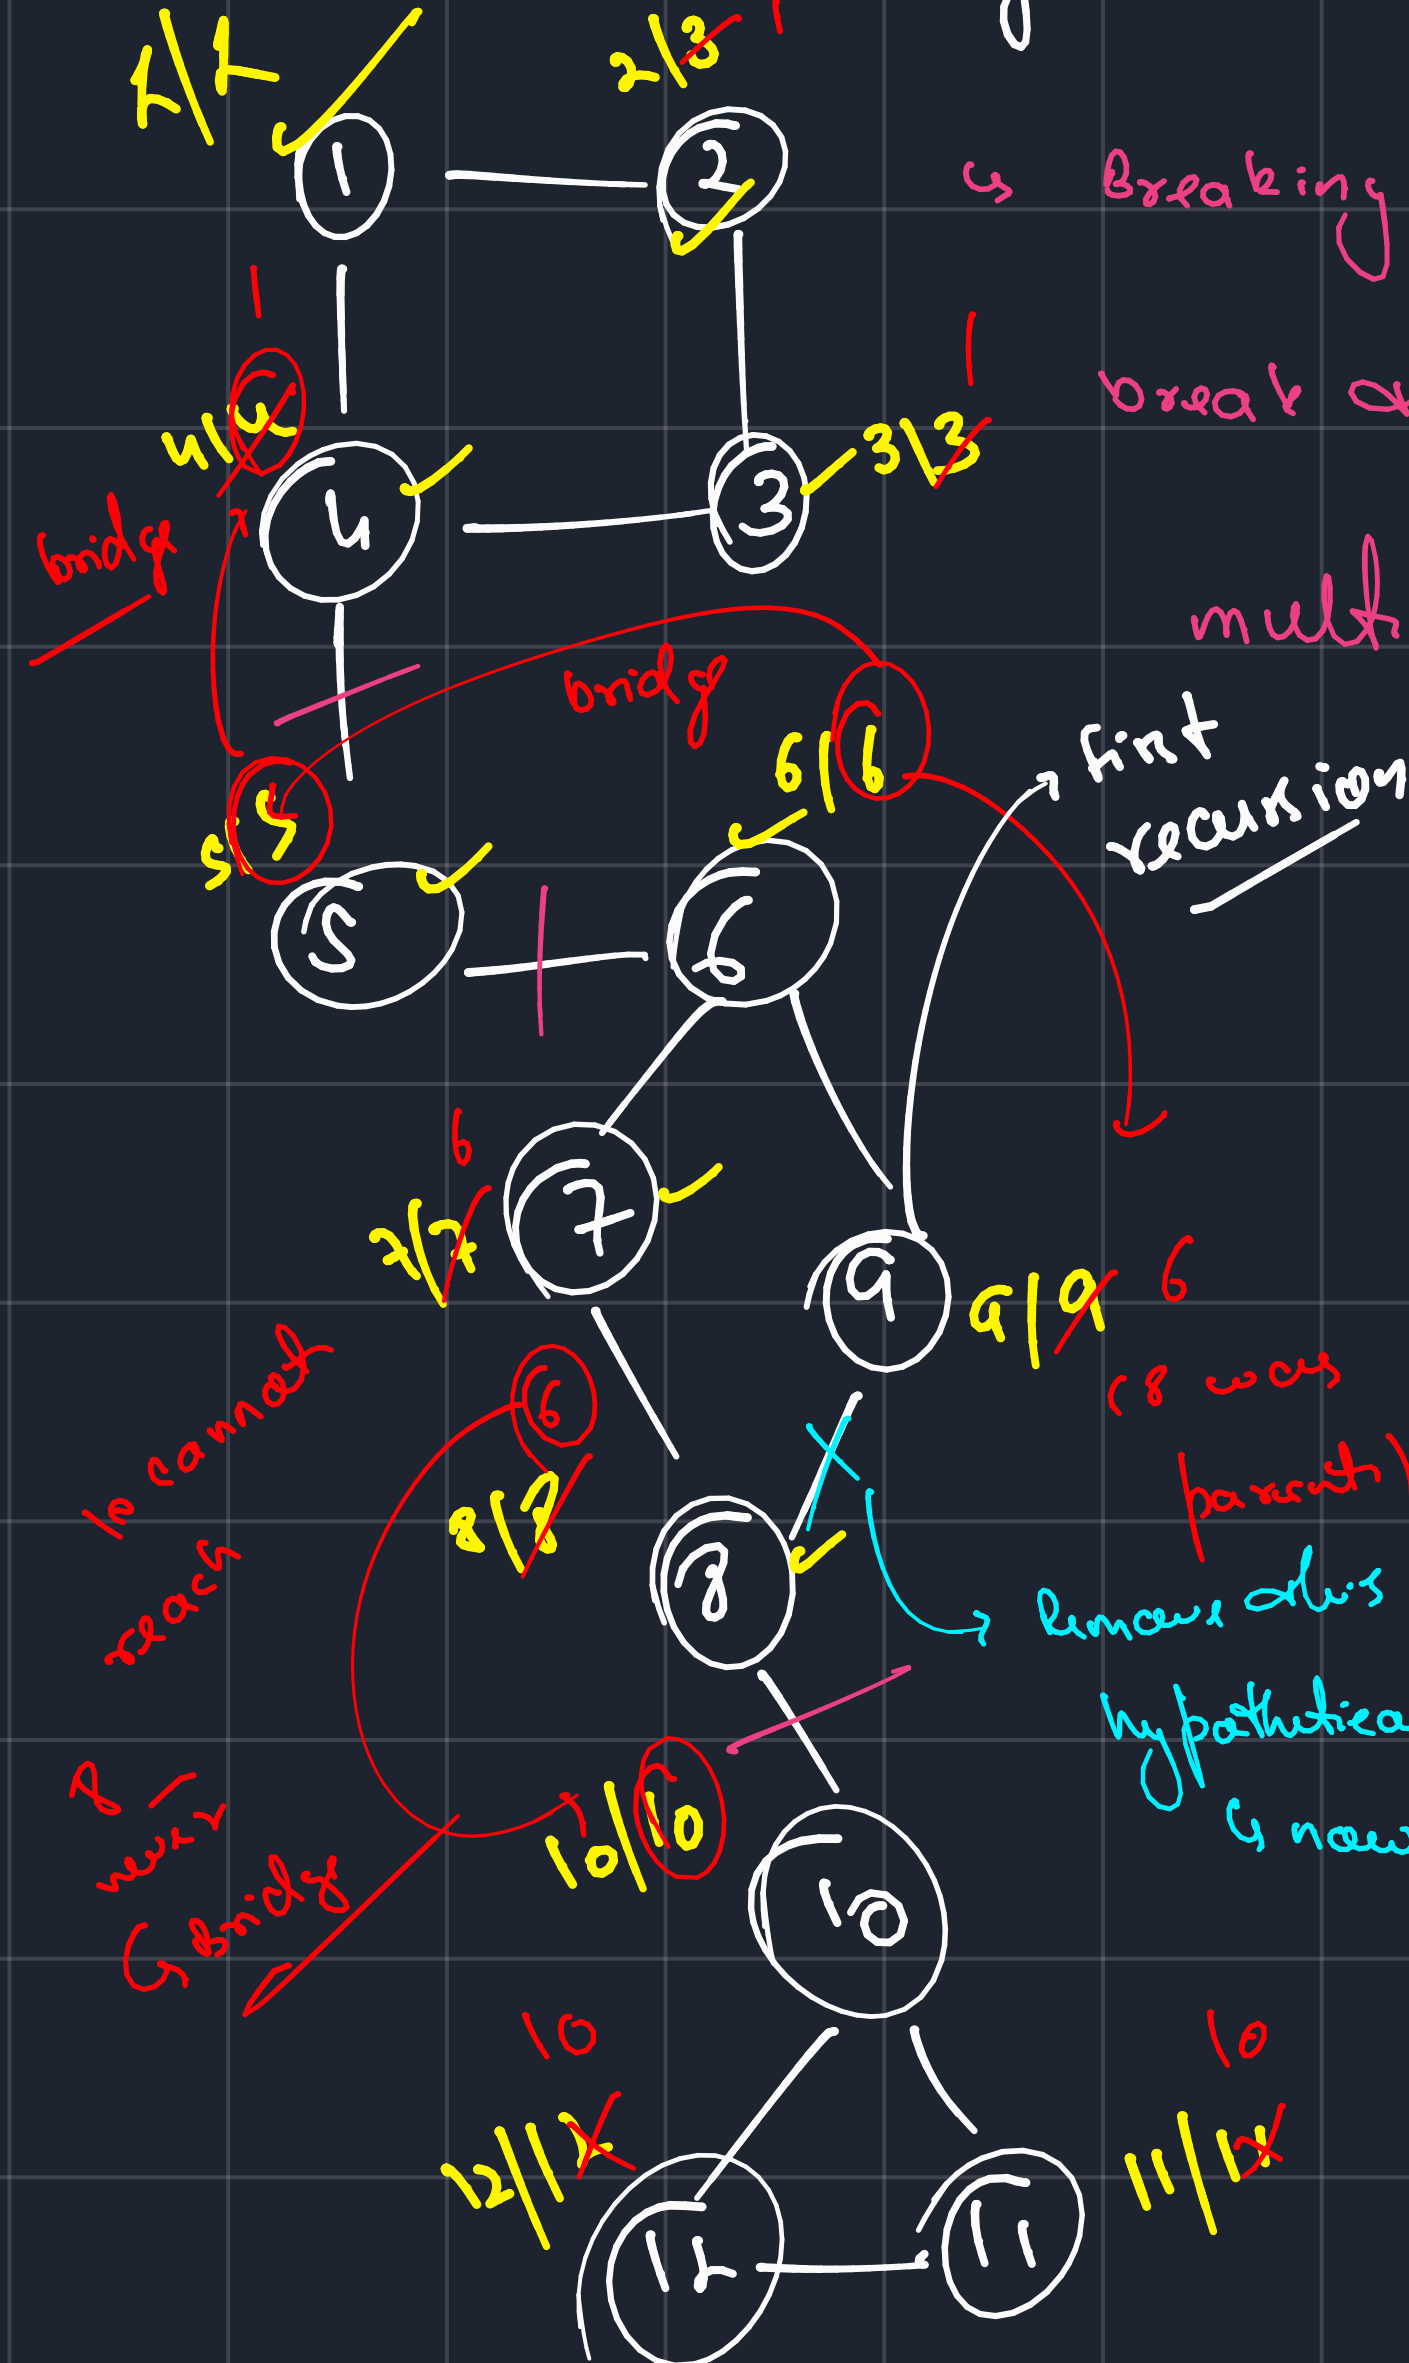

from parent.

$\rightarrow$ why?

We need to get

any other way

then the direct connection.

red traversal is up
