

↳ count ways to reach n^{th} stair.

↳ either climb one step.

↳ or two step.

↳ shortcut.

1.) Try to represent a problem in terms of index.

2.) Do all possible stuff on that index

acc to the problem statement.

3.) Sum up all stuffs → count all ways

↳ take min of all stuff.

↳ " max " " " .

need to understand it is a DP problem.

↳ count total number of ways.

↳ multiple ways to do a job

↳ find max, min.

Try all possible

ways.

count

best way

apply recursion.

0

0
n

f(ind)

{

if (ind == 0) return 1;
if (ind == 1) return 1;
left = f(ind - 1);

right = f(ind - 2);

return left + right;

}
