

↳ what is system design?

↳ how to start with distributed systems?

eg → scale restaurants. → 1 chef
+ 1 backup chef } master slave
architecture.

(1)

↳ optimise the processes and increase
throughput using the same resources. } → this is called
vertical scaling

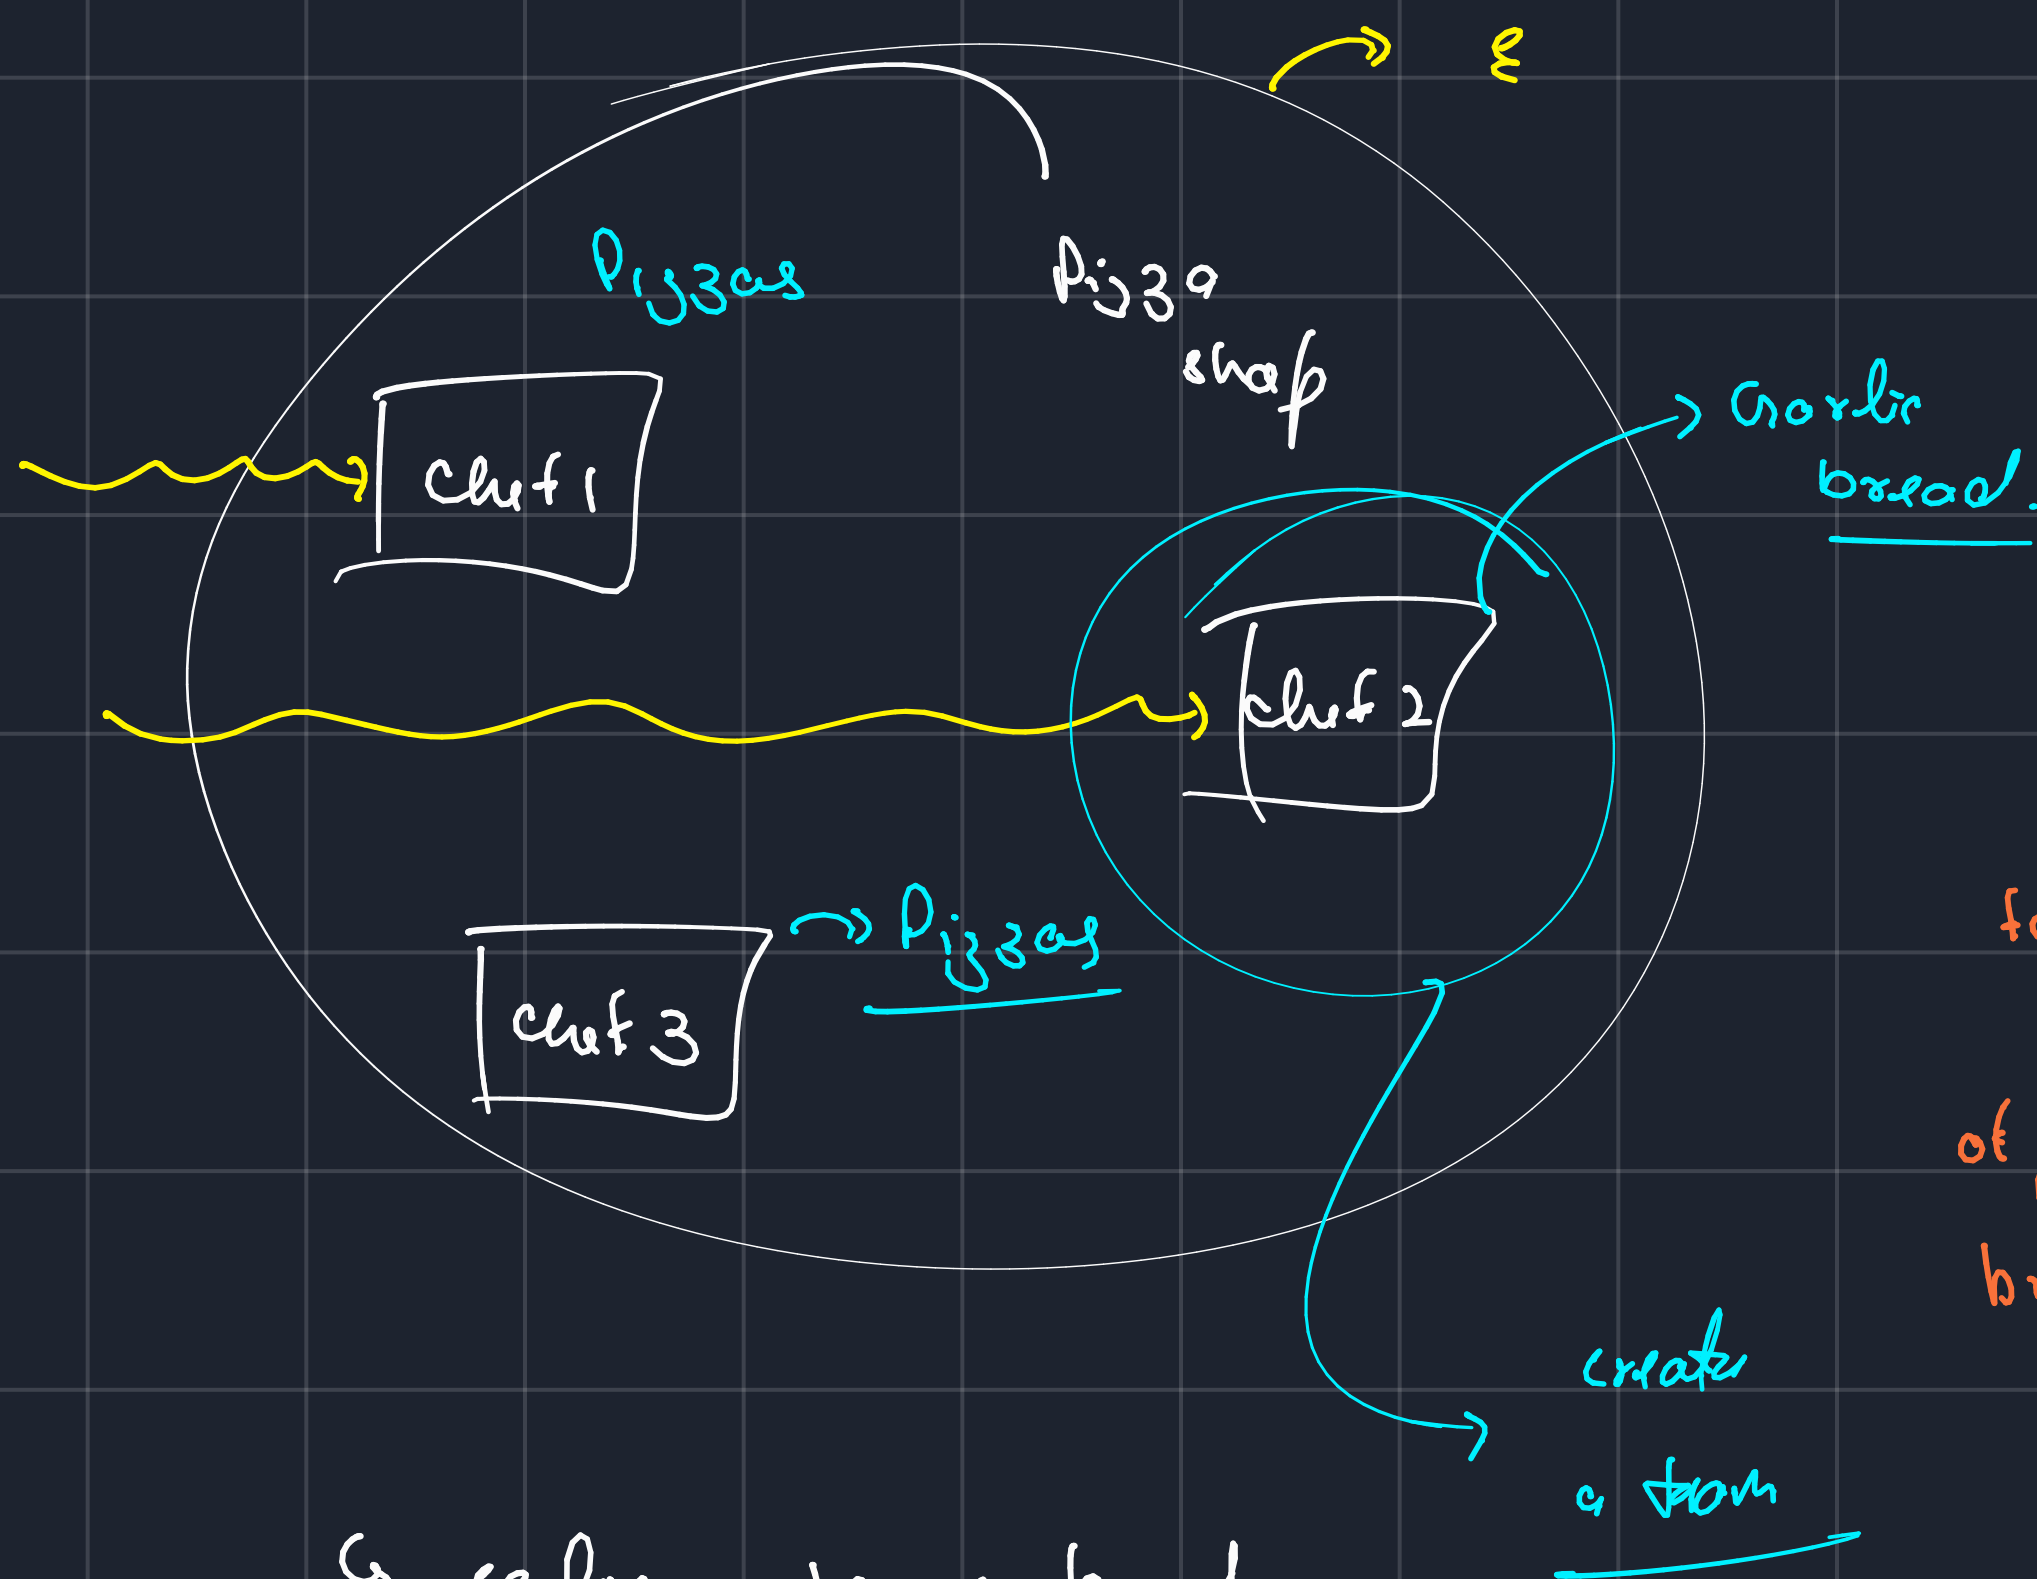

↳ Prepare for the influx at busy-hours
behorehand.

↳ keep a backup plan and avoid
single point of failure.

↳ add more resources to the system

- ↳ microorganismes

How to expand

↳ we can do

separation of
concern here

for status change in
of garb
breed.
-
recp.
↳ only one person
needs to have

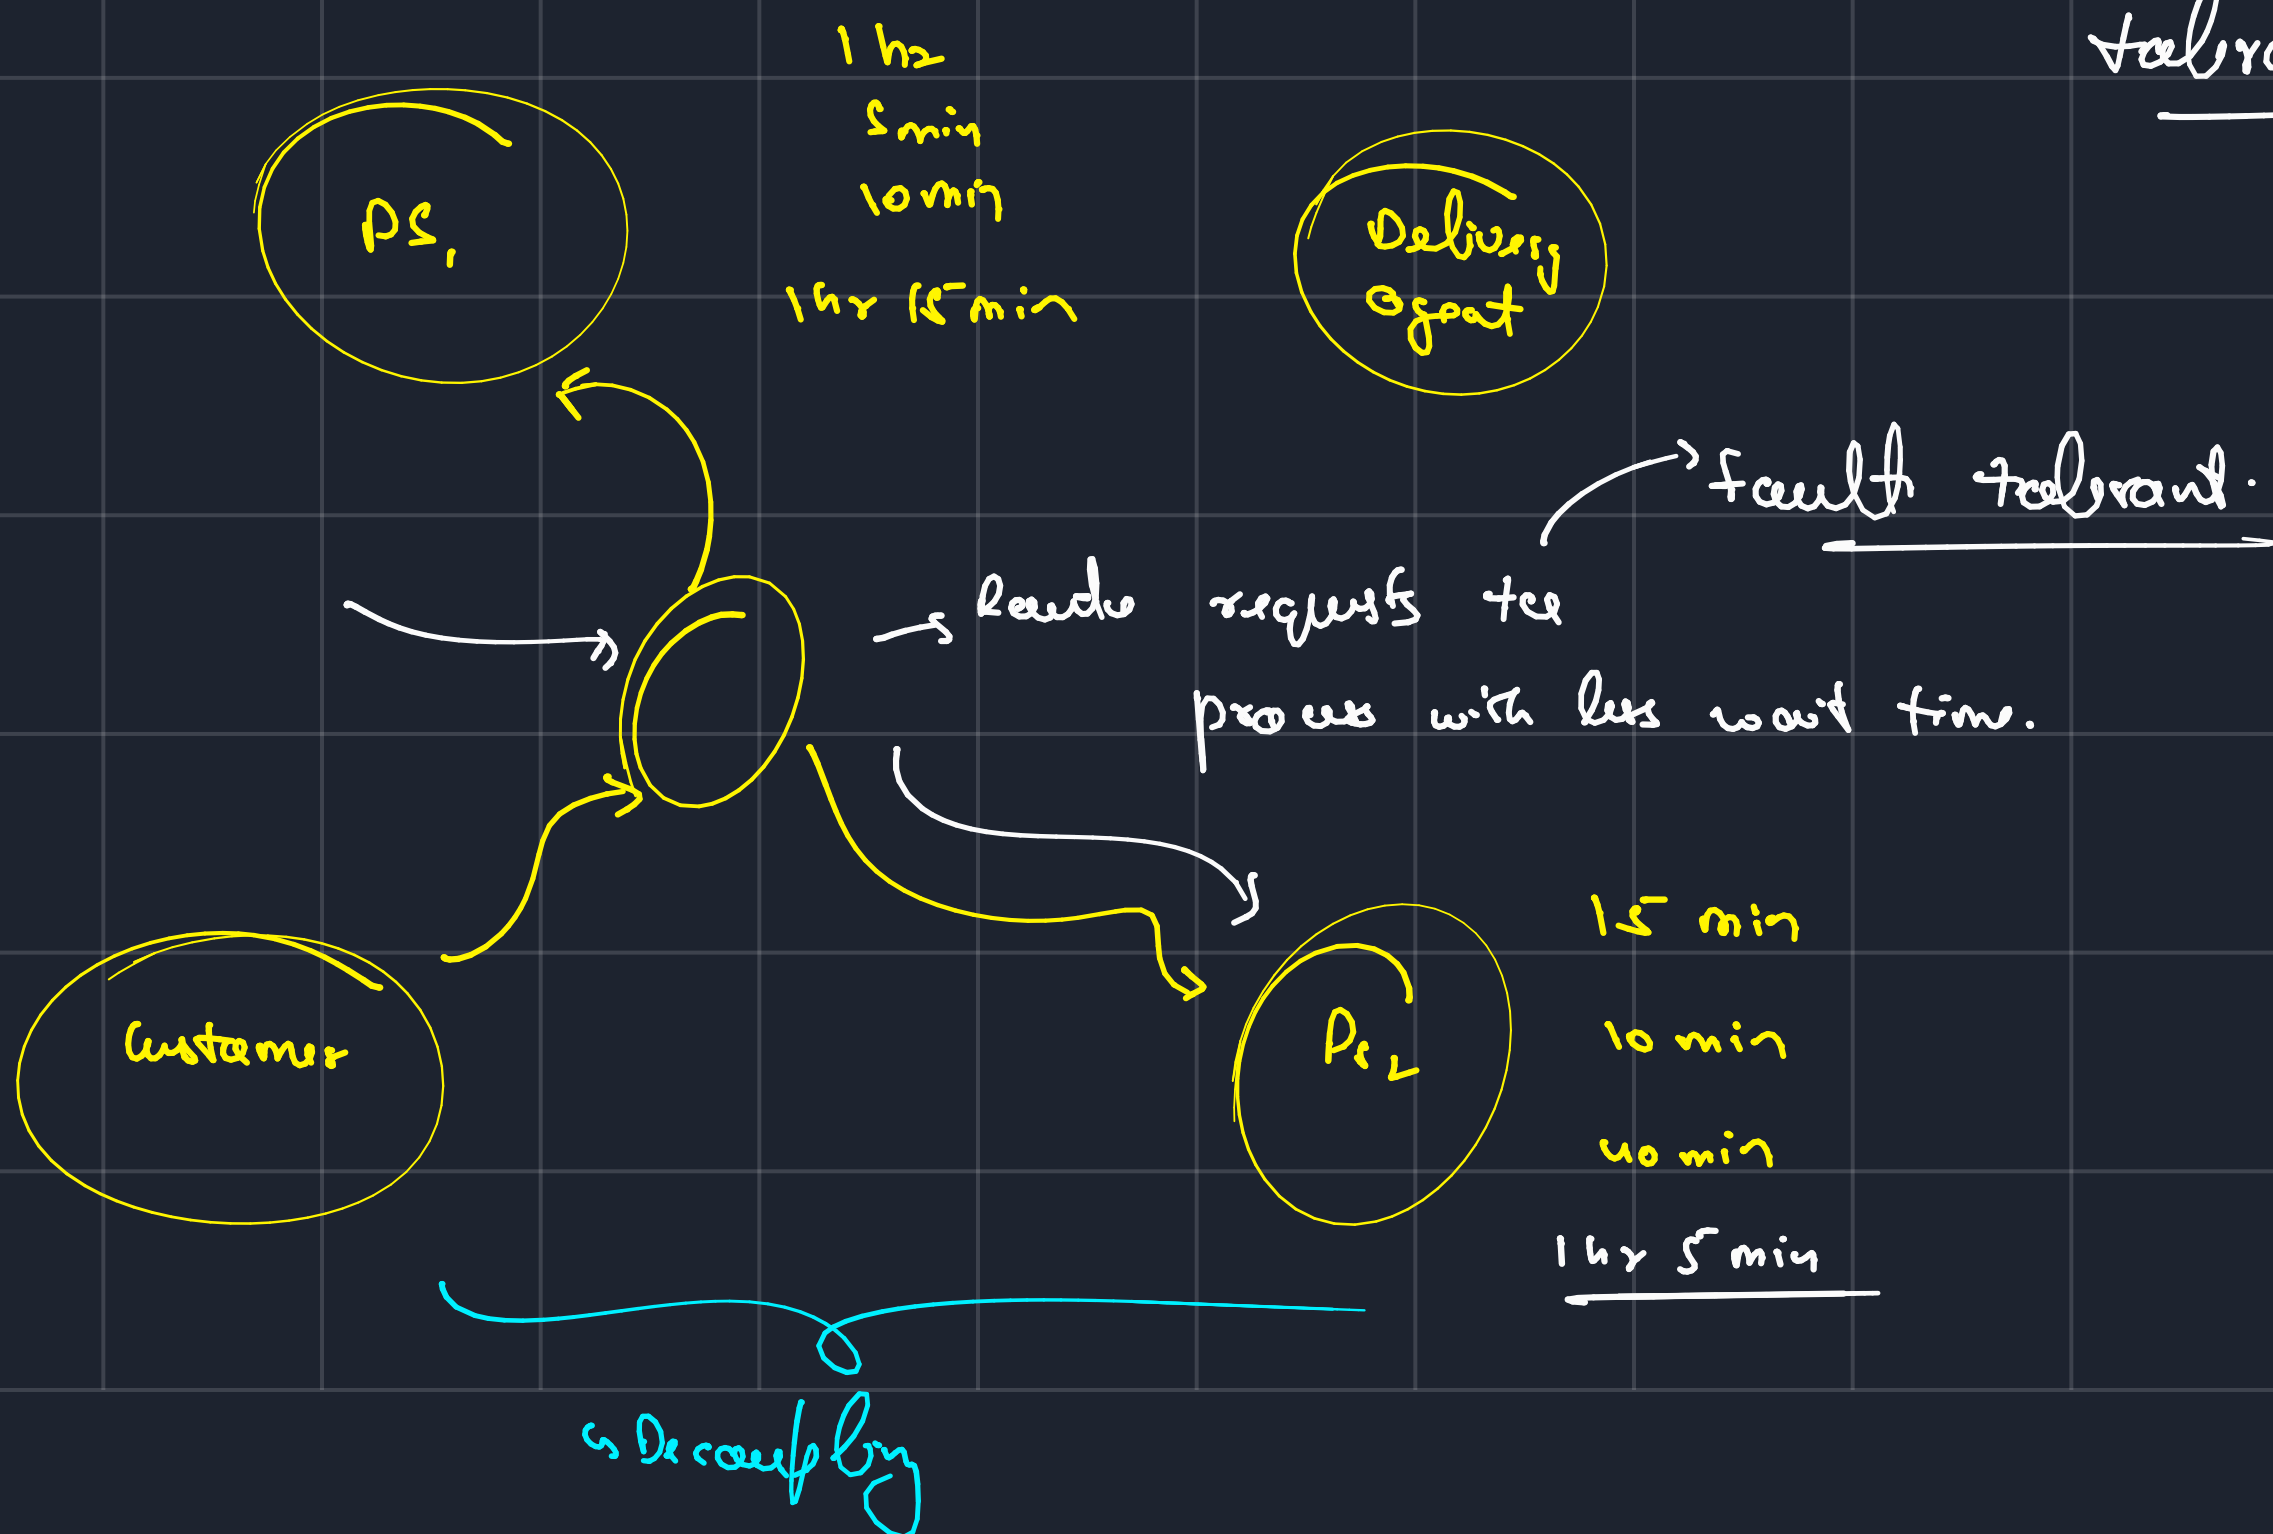

↳ scaling teams based on different parameters.

↳ adding backups → Distributed systems.

↳ Partitioning.

→ This wheel

Orbal makes a
system fault
tolerant

↳ extensibility.

↳ decoupling, logging and metrics.

→ HLD vs LLD.

deals with
