

6

(p)	2	3	2	6	1
	6	2	3	6	2
	5	3	2	3	5
	2	4	3	5	2
	4	5	2	3	6 (q)

coordinates $P(x, y) = P(0, 0)$

$Q(x, y) = P(4, 4)$

$$D_1(P, q) = |s - s| + |y - t|$$

$$D_1 = |0 - 4| + |0 - 4|$$

$$\underline{D_1 = 8}$$

$$D_p = \max(|x - s|, |y - t|)$$

$$\Rightarrow \max(|0 - 4|, |0 - 4|)$$

$$\Rightarrow \max(4, 4)$$

$$\underline{= 4}$$

only $\rightarrow$ Depends
 $\hookrightarrow$ On distance on path

(i) $U = \{2, 3\}$

$\rightarrow$ There is no path
 possible.

2 cannot jump to 6
 as $6 \notin \{2, 3\}$

(ii) $U = \{2, 6\}$

$\hookrightarrow$ There is
 no path

btw p and q.

because
 no
 u-adjacent
 was
 found.
